

Wapin Company, LLP proudly introduces the

Surgi-Sharp Sharpening System *Only \$55!!*

- ⇒ The **Surgi-Sharp** sharpening system is available to the piano industry *exclusively* through **Wapin Co LLP**. There are other more expensive, or more complicated systems for sharpening edge tools, but none that work better.
- ⇒ This system is simple, easy to use, inexpensive to set up, and extremely effective at sharpening chisels, knives, plane blades, or anything else that needs an edge. It makes use of a 1"x42" or 1"x30" benchtop belt sander. If you don't already have one of these very useful tools. [Grizzly Industrial, Inc](http://www.grizzly.com/products/h3140) has these at competitive prices online:
<http://www.grizzly.com/products/h3140>
- ⇒ The Surgi-Sharp Sharpening Kit sells for \$55 plus shipping from Wapin Co., making the entire system only about \$150.00!

Sharpening a chisel using the angle guide

◇ If you need to be more aggressive to either change the angle or if the chisel is damaged, you may need to use a coarser belt. Care needs to be taken to make sure the tool is not overheated. Whatever grits are needed for sharpening, always finish with the 600 grit. Then take off the angle guide and install the leather belt.

◇ Put the polishing compound on the belt without running the sander, as you only need a little, and the block we include will last a very long time. As shown in the picture,

the edge of tool is held pointing down in the same direction as the leather belt is running, just the opposite as when using the angle guide and a sharpening belt.

- ◇ After polishing on the leather belt, you will have a tool or knife that is incredibly sharp!

Final honing of a chisel on the leather belt

Order Online!!! <http://surgisharp.wapin.com/>

The complete kit includes:

**“A Simple,
Effective
Sharpening
System”**

*Piano Technicians
Journal January 2008*

- * **One 320 grit and one 600 grit sanding belt, good for the vast majority of sharpening situations.**
